1.1 SAFETY PRECAUTIONS (MSDS)

Requirement of Directive 91/155/CEE
Edition: 1.00 GB
Initial preparation : December 1st, 1998 Reviewed: December, 2001

1 Product and company identification

Valeo Friction Material for Clutch Facings F491,F410,F810&F810DS,F510
Valeo Friction materials india limited
16A,Sengundram industrial area, Melrosapuram
Via.Singaperumal koil, Kancheepuram District-603204,INDIA
Tél.: +91 4447413450 ,Fax.:+91 4447413480

2 Composition/Information on components

Composite Material with glass fibers and organic binders.

DESCRIPTION	F491	F410	F810&F810DS	F510&F510MCC
Glass fibers	31/38%	28/36%	10/14%	19/25%
Synthetic organic fibers	2/5%	4/9%	23/30%	4/8%
Phenolic and melamine / Thermos et binders	21/28%	26/34%	20/26%	18/24%
Rubber binders	16/21%	12/16%	12/17%	11/16%
Carbon black	6/9%	5/8%	3/7%	3/7%
Barium sulfate	9/13%	8/12%	7/11%	7/11%
Copper wire	1/4%	1/4%	8/12%	18/24%

3 Hazard identification

No danger warning

4 First aid measures

No particular measures.

5 Fire fighting measures

Extinguishing means: water, carbonic foam, powder extinguishers
In case of fire: equipment for fire prevention.
Particular measures of intervention: release of smoke fumes requiring the need to wear a pressure self-contained breathing apparatus.

1.1 SAFETY PRECAUTIONS (MSDS)

6 Accidental release measures

Collect the pieces and put them on appropriate container for recovery or elimination.

7 Handling and storage

Wearing gloves is recommended during prolonged handling in order to avoid skin irritation.

When machining a product, use equipment to inspire any dust produced with the means adapted to
work conditions in force.

Stable product to be kept preferably in its original packing. Avoid corrosive atmospheres.

8 Exposure controls / Personal protection

Eye protection: no particular measures required.

Hand protection: wearing gloves is recommended during intensive handling.

Breathing protection: adequate inspiration when machining the product..

NB: according to customer requests, possibility to apply an anti-dust treatment.

Before eating and when work is finished, wash hands with soap and water.

9 Chemical and physical properties

Physical appearance: solid

Color: black

Odor: without

Change appearance: not applicable

Specific gravity:	F491	F410	F810&F810D	F510&F510MCC
	1.69 Kg/dm3	1.65 Kg/dm3	1.76 Kg/dm3	1.89 Kg/dm3

Vapor pressure: not applicable

Solubility in water: not applicable
(difficulty in measurement)

Solubility in acetone: partially soluble

pH: not applicable

Flash point: not applicable

Explosive limit: not applicable

Vapor pressure: not applicable

Auto-ignition temperature: more than 400°C

1.1 SAFETY PRECAUTIONS (MSDS)

10 Stability and reactivity

Thermal decomposition: stable product, start of decomposition from 350°C with inflammable and harmful start of vapor release.
Decomposing products: organic compounds containing nitrogen or. sculpture.

Dangerous reactions:
Incompatible products:
no dangerous reaction observed.
oil, grease (only to guarantee good use of the material).

11 Toxicological information

Physiological effects: none known.

12 Ecological information

Persistency: not biodegradable
Heavy metals: according to the formulation
- copper and components N°CAS 7440-50-8

13 Disposal information

Product: Recommendation: remove according to local or national rules in force. Discharge new or used parts on to authorized waste dump.
Packing: Recommendation: packing should be disposed of according to local or national rules on packaging.

14 Transport information

Classification: not classified. No label necessary according to law in force.ONU N°:
ADR/RID:
IMO-IMDG code: ICAO/IATA:

15 Statutory information

CE symbol : no measure required.
Risk labels: not required . Security labels not required

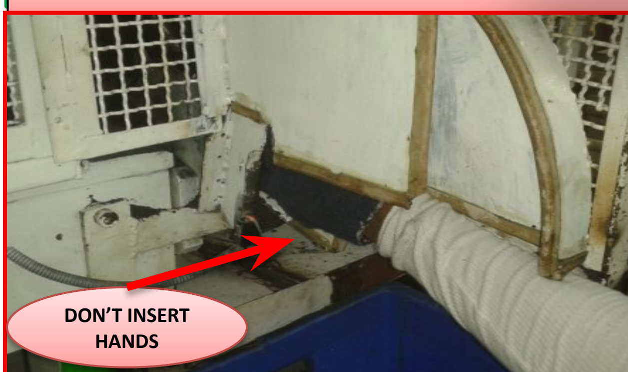
16 Other information

The information given above is based on current knowledge. This material safety data sheet describes
the product under security aspects only. In no case, the above information should be used as a quality guarantee.
Valeo - Matériaux de friction declines responsibility concerning any possible risks that may occur if
the product is employed for any other use than the one for which it is manufactured.
This document is written by the Environment Coordinator of Valeo - Matériaux de friction in Limoges

SAFETY

1.2 PERSONAL PROTECTIVE EQUIPMENT (PPE) MUST WEAR AT WORK STATION - PREFORM

1.3 SAFETY PRECAUTIONS ACTIVITIES & EMERGENCY SWITCHES



1.Do not insert hands between pressure plate and roller plate when the machine is ON

2.Do not touch yarn when the cycle is running.

4.The operator must wear the safety shoes and gloves.

3.Do not operate the machine without yarn. & When without yarn running m/c will auto stopped.

1.3 SAFETY PRECAUTIONS ACTIVITIES & EMERGENCY SWITCHES

Note :

If emergency Activated

1. No one Functioning working in Operator panel

SAFETY GUARD

	
Machine guard	Machine guard(P0516,P0518 & P0519)
If any guard open, Machine must be not Operate. (Safety POKA YOKE available)	If any guard open, Machine must be not Operate. (Safety POKA YOKE available)

Note :

If Emergency Button and Safety guard not working

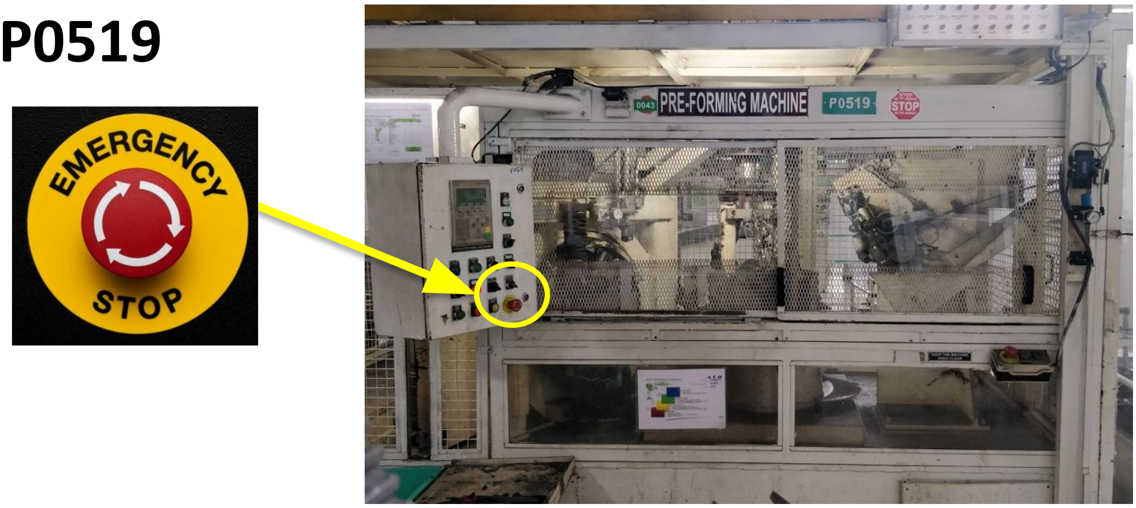
1. STOP the machine Immediately

2. Inform to Supervisor

3. Raise the Breakdown and update in Line QRAP (eQRAP)

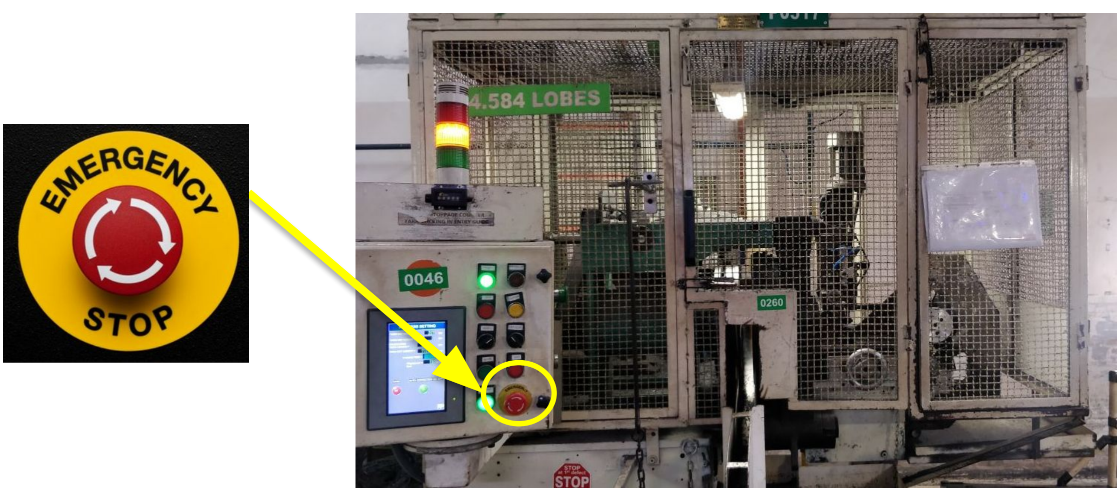
1.3 SAFETY PRECAUTIONS ACTIVITIES & EMERGENCY SWITCHES

EMERGENCY button (P0516,P0518 & P0519



Location : Machine Operator panel

EMERGENCY button



Location : Machine Operator panel

SAFETY

1.3 SAFETY PRECAUTIONS ACTIVITIES & EMERGENCY SWITCHES

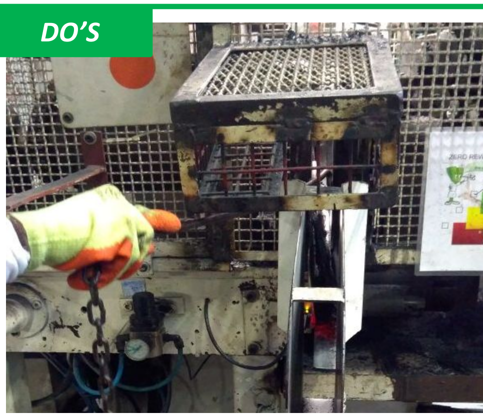
DO'S

TO WEARING ALL PPE WHILE WORK

DON'T S

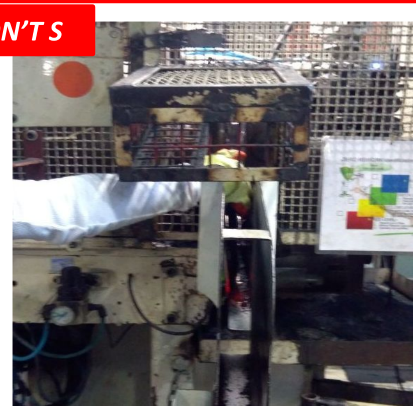
TO WEARING ALL PPE WHILE WORK

DO'S



TO USE CLEANING ROD FOR REMOVE THE STRICKING YARN

DON'T S



DONT USE HAND FOR REMOVE THE STRICKING YARN

DO'S

TO TOUCH THE ENTERING YARN AFTER EMERGENCY OFF

DON'T S

RUNNING DON'T TOUCH THE ENTERING YARN WHILE MACHINE

1.3 SAFETY PRECAUTIONS ACTIVITIES & EMERGENCY SWITCHES

DO'S

TO PUSH THE TROLLY WHILE MATERIAL MOVING TIME

DON'T S

DON'T PULL THE TROLLY WHILE MATERIAL MOVING TIME

BEFORE START THE MACHINE,

SAFETY OK TO START

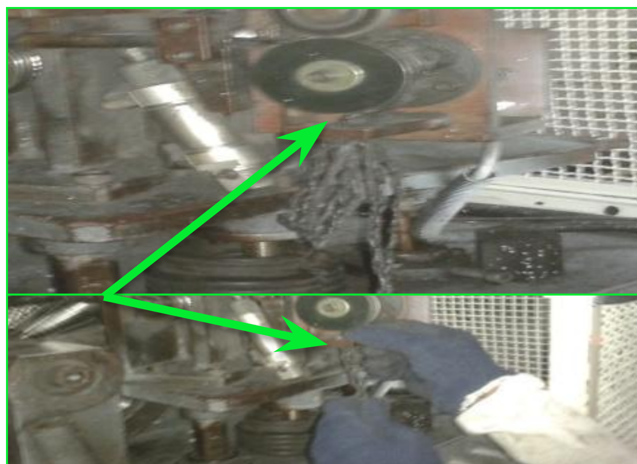
IS MANDATORY

1.4 Precaution taken to Reduce the Accident

1. Separate hook provided to take the Preform which is sticking I pressure plate

2. Cycle will start only two hand switch.

3 .Thread press also operate two hand switch.

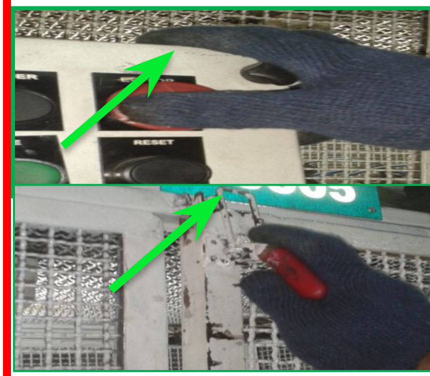


4 . When ever the yarn gets entangled at the yarn entry guide roller, SWITCH OFF the machine and correct the yarn.

5.When Index motor work at door close condition only in Preform m/c PO 518, P0516 and 519.

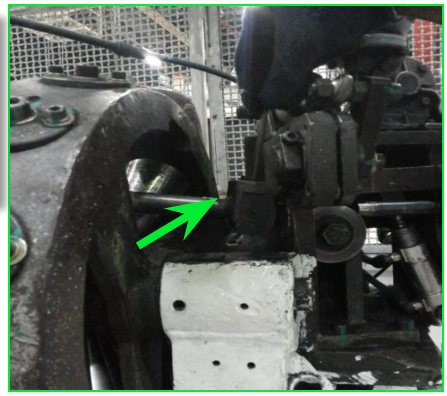
6.Without Yarn condition Machine Automatic stopped.

1.5 Procedure for Critical task(Pressure plate and roller cleaning)

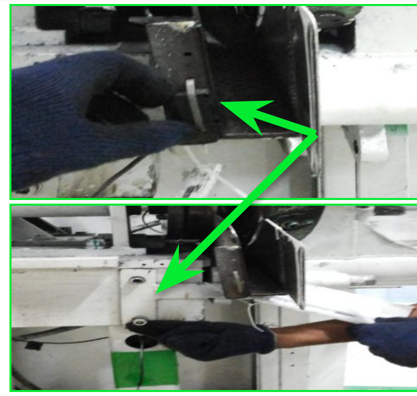


Step-1 :- Press Emergency switch before removing the nozzle.

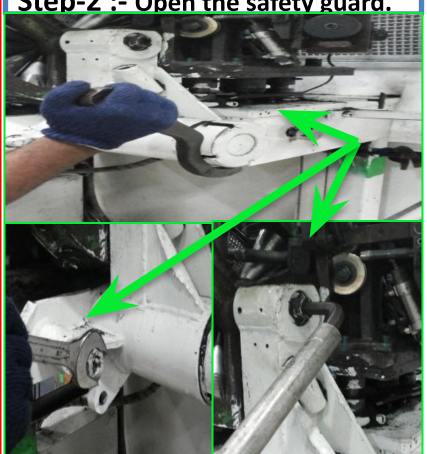
Step-2 :- Open the safety guard.



Step-3:- Remove the nozzle.



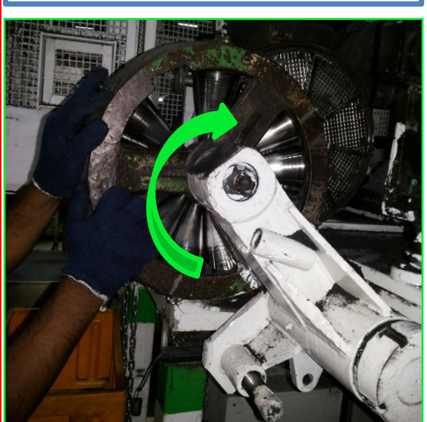
Step- 4:-.Remove the sensor, load cell and chute.



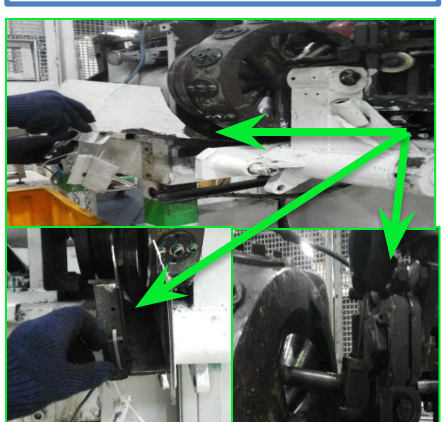
Step-5 :- Loosen the lock nut provided below the roller plate

Step-6:- Hold the roller plate assembly and carefully bring it down.

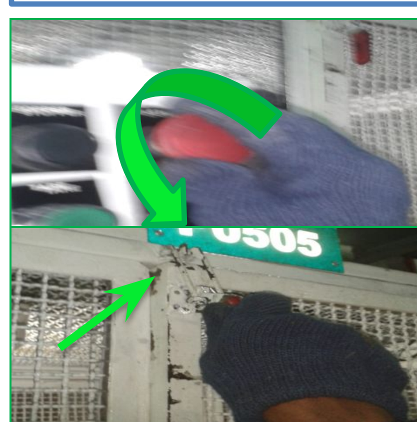
Step-7:- Now clean the roller plate using wire brush & Clean the roller assembly.



Step-8:- Lift the roller assembly carefully and lock it.



Step-9 Assemble chute, load cell, sensor and nozzle



Step-10:- close the safety guard and Release the emergency switch

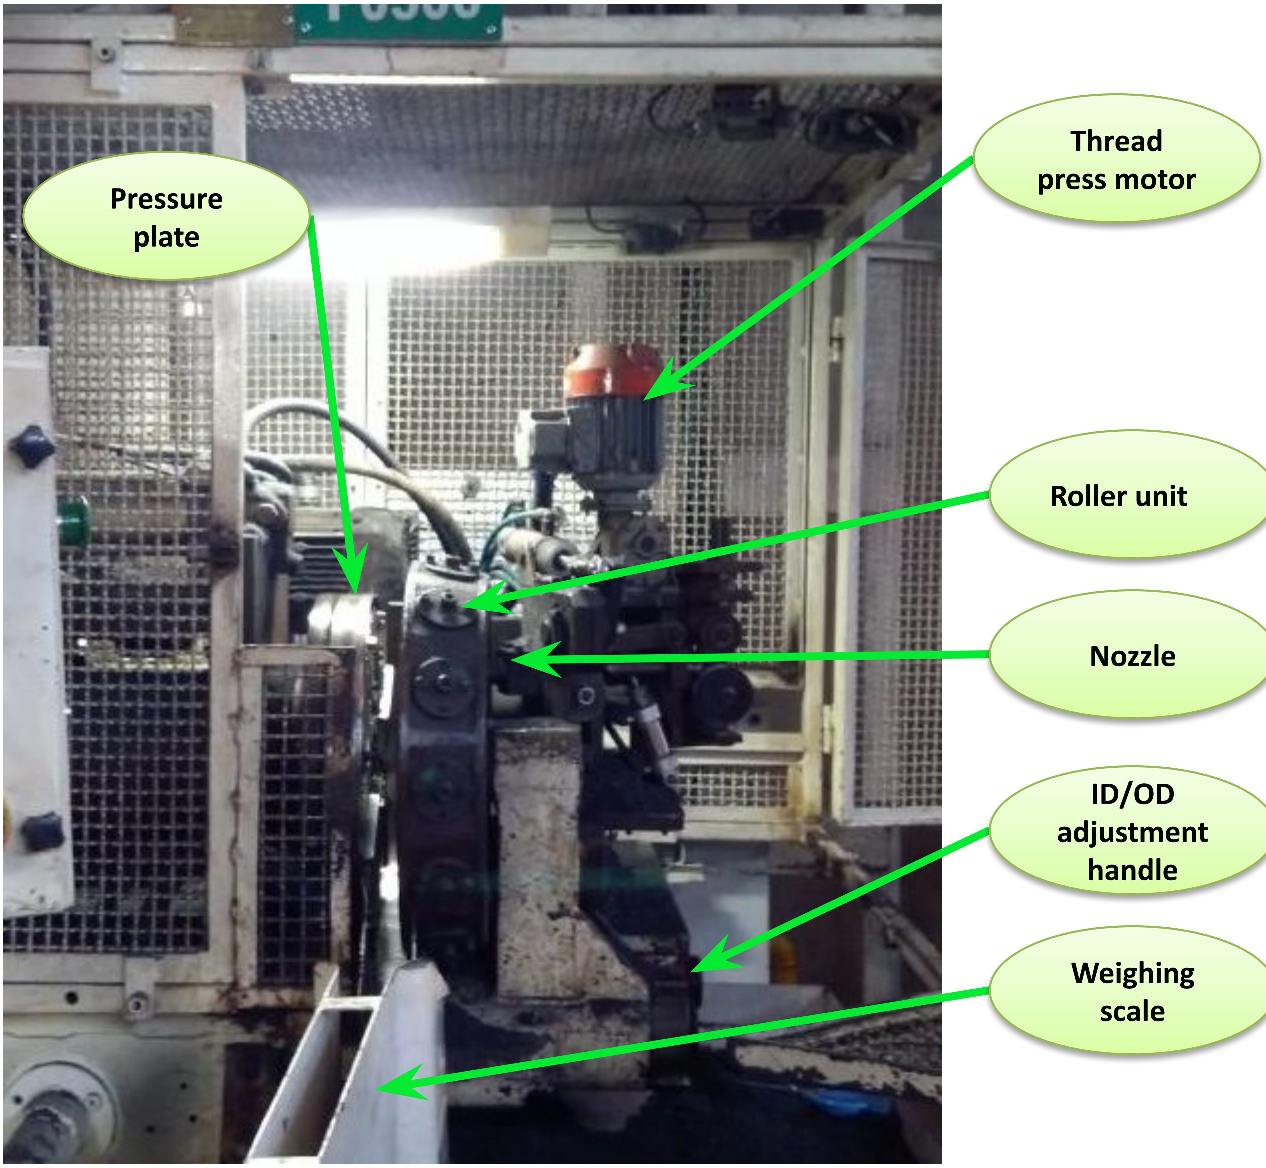
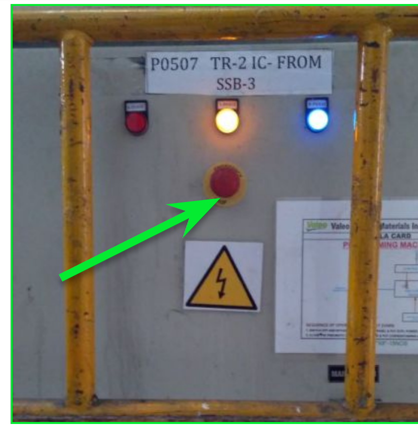
2.1 MACHINE FRONT VIEW



2.2.1 STARTING PROCEDURE(P0501 TO P0507, P0509 TO P0515 & P0517



1.TEAM LEADER TO INFORM THE PRODUCTION PLAN.

2.FEED YARN AS PER THE YARN FEEDING ARRANGEMENT

3. TURN ON MAIN SWITCH PROVIDED IN THE PANEL BOARD.

4. RELEASED THE EMERGENCY BUTTON

5.OPEN THE SOLENOID VALVE FOR THE AIR LINE.

6.TO ENSURE BEFORE STARTUP THE FOLLOWING BINS ARE IN THE LOCATIONS

7.CONTROL PRESS ON.

8.TO ENTER THE YARN CORRECTLY LIKE ABOVE INSTRUCTION

9.SET THE PREFORM WEIGHT and Tolerance as per traceability

2.2.1 STARTING PROCEDURE(P0501 TO P0507, P0509 TO P0515 & P0517

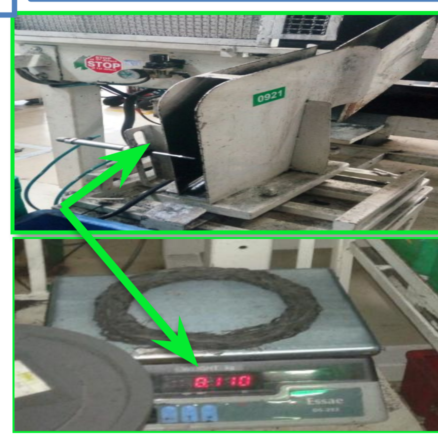
10.SET ID&OD & WIDTH SETTING

Auto Mode

11.SELECT SINGLE FOR CHECKING

13.PRESS CYCLE START PUSH BUTTON.

14.CHECK THE DISC DIMENSIONS , IF THE DIMENSIONS ARE NOT OK ADJUST THE SETTINGS.



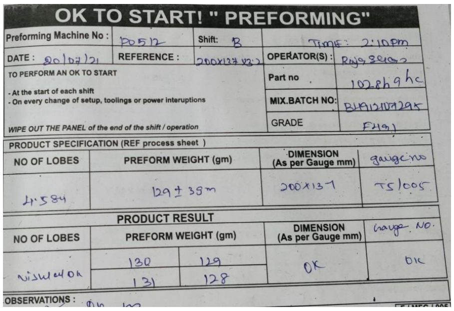
15.TO CHECK THE WEIGHT IN AUTO SCALE .IF ANY B/D OF AUTO WEIGHT SCALE. TO CHECK THE MANUAL WEIGHT SCALE (100%)..

16.PRODUCT "OK" THAN CONTINUOUSLY 4 NO'S RUNNING

17.TO PUT OK PREFORM TO THE GREEN BIN

18. PUT THE REJECTION IN RED BOX

2.2.1 STARTING PROCEDURE(P0501 TO P0507, P0509 TO P0515 & P0517



OK TO START! " PREFORMING"

Preforming Machine No : P0512	Shift: B	TIME: 2:10pm	
DATE : 20/07/21	REFERENCE : 200X137 V3:2	OPERATOR(S) :	Raja Sekar
TO PERFORM AN OK TO START - At the start of each shift - On every change of setup, toolings or power interuptions		Part no	102849hc
		MIX.BATCH NO:	BH9121107295
WIPE OUT THE PANEL of the end of the shift / operation		GRADE	F491

PRODUCT SPECIFICATION (REF process sheet)

4.584	129 ± 3gm	200X137	TS/005

PRODUCT RESULT

NO OF LOBES	PREFORM WEIGHT (gm)		DIMENSION (As per Gauge mm)	Gauge. NO.
Visual ok	130	129	OK	OK
	131	128		

OBSERVATIONS :

19.TO UPDATED THE OK TO START NOTE. DURING PRODUCTION START UP, AFTER MACHINE BREAKDOWN CLEARANCE, TOOL CHANGE & POWER CUT RESUMED. PERFORM "OK TO START". IT IS MANDATORY.

20.CASE OF ANY YARN STUCK UP (ENTANGLED) IN THE PREFORM MACHINE OPERATOR SHOULD STOP THE MACHINE AFTER CLEAR THE YARN STUCK UP TO START THE MACHINE

Note:

If POKA YOKE not working follow belows

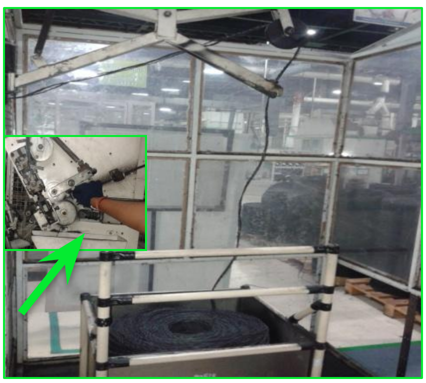
1. STOP the machine immediately
2. Inform to Supervisor
3. Update in Line QRAP
4. Sort already produced

2.2.1 STARTING PROCEDURE (P0516,P0518,P0519 & P0520)

1. RELEASED THE EMERGENCY BUTTON

2. To Ensure before startup the following bins are in the locations

3.CONTROL PRESS ON.

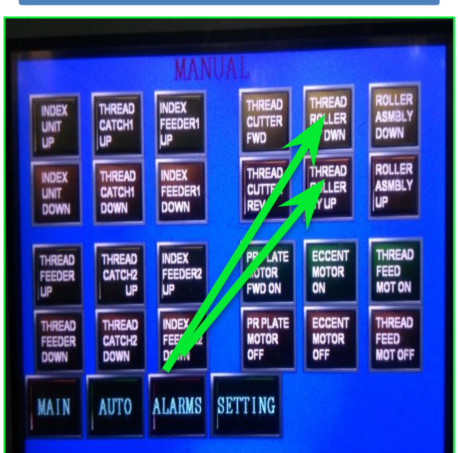


4.Feed yarn as per the yarn feeding arrangement

5.Thread press Catching ON.

6.Select Auto mode.

7.Set the weight and tolerance as per the traceability



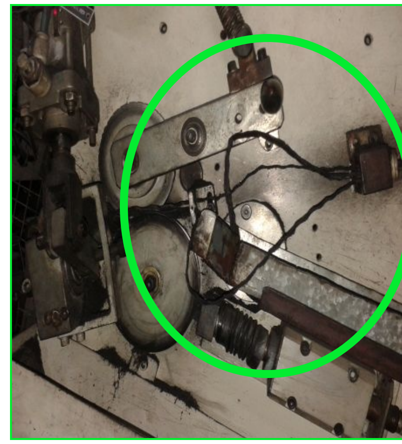
8.SET ID&OD & WIDTH SETTING

9. Keep the single/cont switch in the single mode.

2.2.1 STARTING PROCEDURE (P0516,P0518,P0519 & P0520)

10..PRESS CYCLE START PUSH BUTTON. Run 4 nos and perform OK TO START

11.Check the disc dimensions and weight. If the dimensions are not OK adjust the settings.



12.Incase of any yarn stuck up (Entangled) in the Preform machine operator should stop the machine after clear the yarn stuck up to start the machine

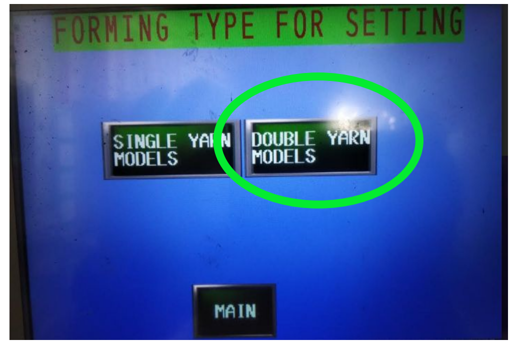
OK TO START TO BE PERFORM, DURING PRODUCTION START UP, AFTER MACHINE BREAKDOWN CLEARANCE, TOOL CHANGE & POWER CUT RESUMED.

PERFORM "OK TO START". IT IS MANDATORY.

2.2.1 STARTING PROCEDURE (P0516,P0518,P0519 & P0520)

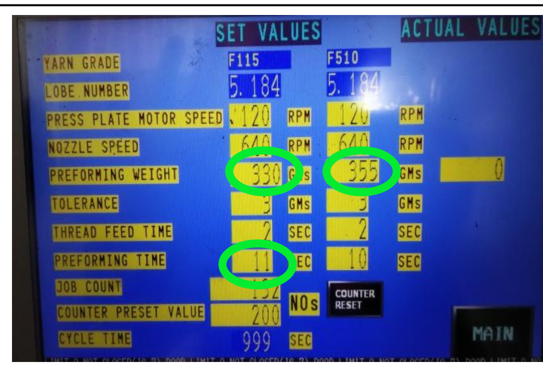
FOR UNDER LAYER

1.Press the model select button on the screen before select the model ensure selector switch in manual mode



2.Select double layer from HMI

3.Press the setting button on the screen



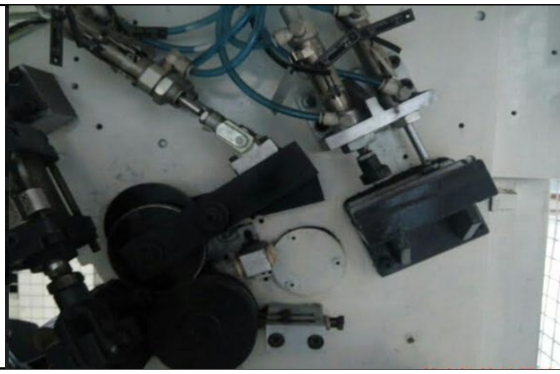
4.Set the value F115 and F510 as per traceability use setting screen mode. Adjust the prefroming time using setting screen if needed

5.Two arm provided different color to differentiate grade green for F115 and yellow for F510

8.Press resume cycle for stop and restart of cycle when yarn got struck

2.2.1 STARTING PROCEDURE (P0516,P0518,P0519 & P0520)

FOR UNDER LAYER



7.Yarn entry given two passage provided for different grade F115 and F510

8.Press resume cycle for stop and restart of cycle when yarn got struck

9.Pressure plate regulator

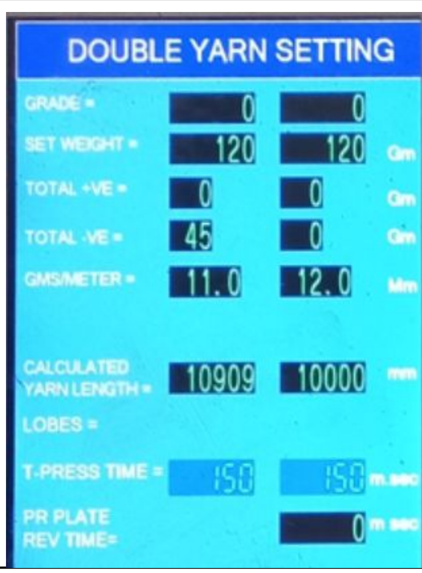
10.Two regulator given for individual pressure control of yarn feeder rollers

2.2.1 STARTING PROCEDURE (P0510)

FOR UNDER LAYER

1.Press YARN SELECT button in HMI

2.Select Single yarn setting or Double yan setting as per the requirement



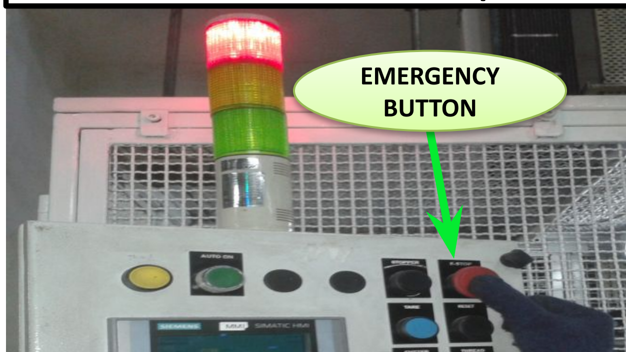
3. Enter the weights

8.Press resume cycle for stop and restart of cycle when yarn got struck

2.3 Stopping procedure

1.To stop the cycle press emergency push button.

2. To shut down the machine perform the following sequence,

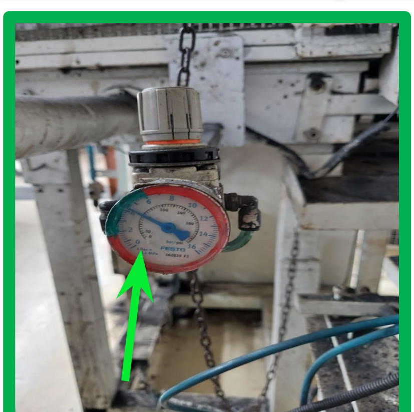


a. To stop the cycle press emergency push button.

b. Turn off the Main switch provided on the Panel board.

C. Close the solenoid valve for the air line.

2.4 Requirement & Process Parameters



1.Set the air pressure within limit = 2 to 6 bar.

2.Set of tools & Scissors

3.Gauges to check the perform & Weight scale.

24	26/08/24	KB	Reaction to non conformity rule modified

3.1 Reaction to Non conformity

Reaction to Non Conformity Rule-APT 2

Description Of Problem	Cause	Rule	Reaction Plan
Yarn Stuck up	Yarn travel issue in Nozzle	Clear the yarn from the nozzle,scrap the defective part and restart the process	Apply the Rules step by step, if not resolved stop the machine and Update the QRAP Board and follow the QRQC Procedure.
Double Yarn / Yarn Missing	Input yarn missing in G5	Cut the defective portion of the yarn and hand over to G5 Process and contiue the production	
OD/ID Not ok	Nozzle position not as per requirement	Adjust the nozzle position using ID/OD adjusting wheel	
Preforming visual Not ok	1. Insufficient pressure 2.Rollers struck up	1.Adjust the pressure with in the specification. 2.Check whether the rollers are rotating freely.	
Holes in the preform	1. Insufficient pressure 2.Rollers struck up	1.Adjust the Pressure 1 bar to 2 bar 2. Check whether all the rollers are rotating	
Yarn sticking issue	1. High Preforming pressure 2. High humidity of yarn 3.Yarn particles sticking to pressure plate and rollers	1. Reduce the preforming pressure 2. Check the humidity of input yarn 3. Clean the pressure plate and rollers	
Preform width small / Big	1.Nozzle stroke length setting issue 2.Rollers struck up 3.Nozzle slit wornout 4. Nozzle position issue	1. Adjust the nozzle stroke length by adjusting the eccentric accordingly 2. Check whether the rollers are rotating freely. 3. Check the nozzle slot 4. Check the gap between nozzle and first roller	
Lobes formation Not ok	1. Yarn sticking to the rollers/ Rollers struck 2. Nozzle slit wornout	1. Clean the rollers and make it free to rotate 2. Ensure Nozzle end slit is 8mm	
ID/OD variation	NIL	NIL	
High Weight	1. Variation in impregnation rate of yarn 2. Encoder issue	1.Scrap the Part,Check wheather the next two parts are corrected to the required spec by auto weighing programme. 2. Increase the density setting	
Less Weight	1. Variation in impregnation rate of yarn 2. Encoder issue	1.Scrap the Part,Check wheather the next two parts are corrected to the required spec by auto weighing programme. 2. Decrease the density setting	

3.2 ABNORMALITY MANAGEMENT MATRIX

Abnormality Management Matrix						
Sl. No	Abnormal Sitiuation	Effect	Action Plan	Responsbility	Record	Remarks
1	Any Safety Issue/Incidents	1) Loss of man hour	1)Stop the machine and inform to supervisor 2) Allocate other manpower with Required skill	1)Operating engineer 2) Supervisor	1) Update the Line QRAP Board 2) Kosu sheet	For all process wise abnormality Refer Reaction to nonconformance rule in respective process work instruction
2	Power Failure	1) Power cut scrap 2) Capacity loss	1) Run DG and start machines 2) Work on sundays to cover capacity loss	1) Maintenance engineer 2) Logistics - Head	1)Maintenance records 2)MPS	
3	Tool Breakage/Damage	Leads to Produce defective part	1)Stop the Machine and Inform to supervisor 2)Quarantine the lot and initiate sorting activity as per reaction to non conformance	1)Operating engineer 2)Supervisor 3)Quality	1)Update the Line QRAP Board 2)Tool breakage report	
4	Kosu High	Productivity loss	Esclate to APU and Plant Manger	1)Operating engineer 2)Supervisor	1)Update the Line QRAP Board 2)Kosu Grap	
5	High Setting Rejection (Based on Reaction to Non conformity Rule)	Increasing Non Quality Cost	Esclate to Supervisor	1)Operating engineer 2)Supervisor	Update the Line QRAP Board	
6	Inspection Equipment Failure	Leads to Produce defective part	1)Stop the Machine and Inform to supervisor 2)Quarantine the lot and initiate sorting activity as per reaction to non conformance	1)Operating engineer 2)Supervisor 3)Quality	Update the Line QRAP Board	
7	Poka Yoke Not Working	1)Leads to Produce defective part 2)Leads to safety incidents	1)Stop the Machine and Inform to supervisor 2)Quarantine the lot and initiate sorting activity as per reaction to non conformance 3)Allocate other manpower with Required skill	1)Operating engineer 2)Supervisor 3)Quality	Update the Line QRAP Board	

Rule if NC is detected:

1. Do as per Reaction to non conformity rule
2. If not resolved STOP the machines, Record in QRAP and inform to supervisor

3.6 QUALITY CHECKING PROCEDURES

Characteristics	Measuring Instruments	Methods	Criteria	PHOTOS
Preform ID & OD	Preform Gauge	**When:** At start 4 Nos in Ok to Start board & 100% during production. **Why :** To find adopt of ID and OD **How :** Put the formed yarn in the preform gauge and note that ID & OD's are adopt. **What :** Check the formed yarn ID & OD within the Specification	**Ok :** Start Production **Not ok :** Stop at first defect & write in QRAP note	 
Lobes	By visual	**When:** At start 4 Nos in Ok to Start board. **Why :** To detect the non conformance-for minty **How :** By visual count the no of lopes formed in one piece **What :** Check the value as per traceability	**Ok :** Start Production **Not ok :** Stop at first defect & write in QRAP note	 
Weight	Weighing Balance	**When:** At start 4 Nos in Ok to Start & 100% during the production. **Why:** To detect the formed yarn weight **How :** Put the formed yarn in the weighing Balance and note down **What :** Check the value as per traceability	**Ok :** Start Production **Not ok :** Stop at first defect & write in QRAP note

4.1 Standards of Reaction to Process Abnormality

SL. No	Problem	Remedy
1	Conical Rollers are not working	Clean the rollers. Check the bearings. If not ok replace it.
2	M/c not switching ON	Release emergency switch. Open Air Pressure.
3	Noise in Nozzle	Tighten the Nozzle mounting screw
4	Cycle not starting	Check the Sensor provided in the guide. Reverse the pressure plate.
5	Thread feeding problem	Check the nozzle & clean. Check thread pressing roller. Check the Cutter. Check the yarn. Adjust the thread feeding time.
6	Preform sticking with Pressure plate	Check and clean pressure plate. Check the rollers are freely rotating. Check and reduce the pressure.
7	Cycle stopped	Check whether the sensor in the guide way is blocked by any facing or dust.
8	Yarn is not getting cut after of completion of cycle.	Check and adjust the cutter position. Check and grind the cutter.
9	Pressure plate running without pulling the yarn.	Check any block in the yarn path. Check whether the Pressure plate is reversed before starting cycle

LABELING

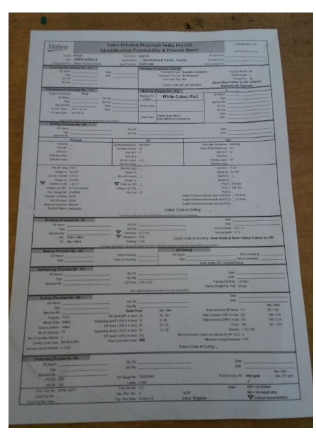
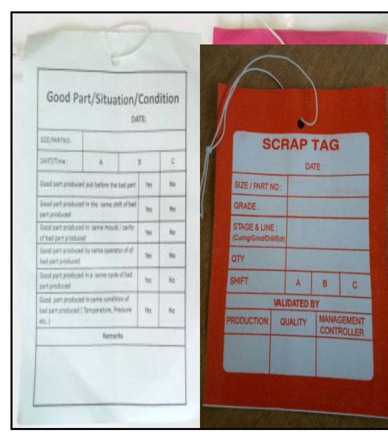
7.1 Labeling Instruction

ALL YARN OR PREFORMING IN THE SHOPFLOOR MUST BE IDENTIFIED WITH TAGS & TRACEABILITY AS PER WORK INSTRUCTIONS





SCRAP TAG: This tag can be used every in the shop floor to mention scrap parts.

SAMPLE TAG : This tag is used for the production of samples for new references. This kind of samples are only requested by R&D.

TRACEABILITY: This Is Used To Identify The PreForming .

PDCA good & Bad parts TAG: This tag can be used every PDCA analysis good & bad part identification tag.

21	25/08/23	KB	Yearly Revision
22	26/08/24	KB	Yearly Revision

8.1 Autonomous Maintenance (Daily)

1. Drain water in filter unit, check lub oil level and pressure setting

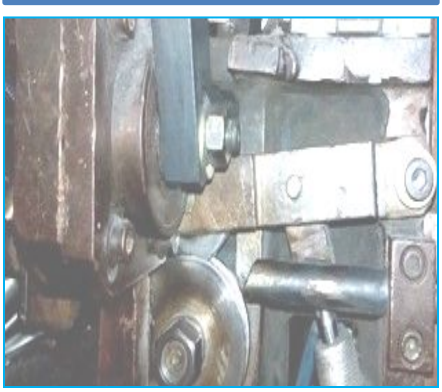
2. Check and tight the roller mounting bolts

3. Check and tight the nozzle bolts

4. Check and tight the width adjustment rod

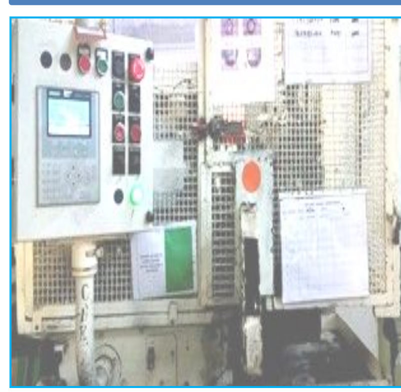
5. Clean the machine

6. Check the safety interlock of doors and its safety switch lever condition



7. Check the cutter and thread press working

8. Check the pressure in the pressure plate regulator



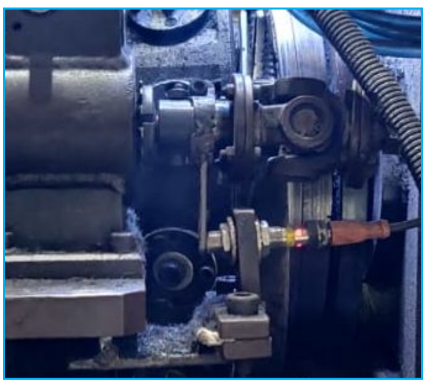
9. Run the machine without yarn

8.1 Autonomous Maintenance (Daily)

10. Check and clean the tube light cover

11. Calibrate the load cell if applicable

12. Check the Emergency button & safety door switches working condition(if available)



13. Check the tail sensor working by rotating (Check the bilinking)

8.1 Autonomous Maintenance (Weekly)

1.Check and clean the knurling plate

2. Check and tight knurling plate bolts

3. Check the tip of the nozzle

4. Check the sharpness of the cutter

5. Check and fix the rubber beading

6. Check The PLC programming done to stop the machine when yarn slips from encoder during auto cycle within 5 sec(P0502,P0511)

8.2 Reaction to Abnormalities

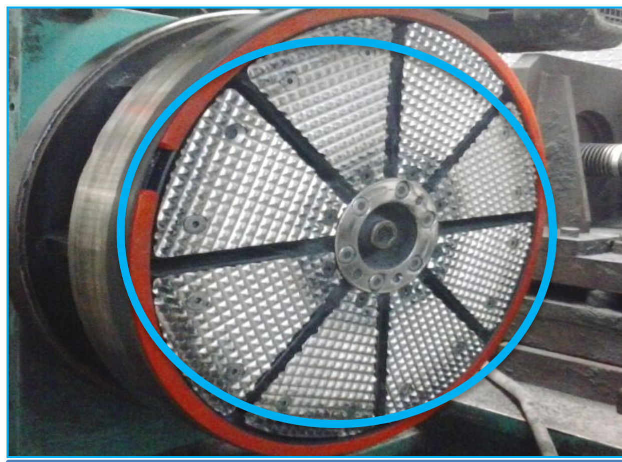
SL. No	Abnormality	Reaction
1	Supply failure.	• Inform to maintenance team and wait for DG supply on. • Once the power indicator at the panel is ON, switch on the machine.
2	Low air pressure	• Check whether the compressor is running • If not inform to maintenance team. • Wait until the air pressure achieved and then switch ON the machine.
3	In case of fire	• Switch off the machine and inform to Emergency Response Team . • Extinguish the fire using corresponding fire extinguisher.
4	In case of fire alarm	• Switch off the machine and walk away through the emergency exit. • Everyone should assemble near the Main gate.(Assemble point)

8.3 Cleaning

Step-1 Clean the Imp regnant powder with the vacuum cleaner.

Step-2 Clean the Machine area.

Step-3 Clean the Nozzle with air.



Step-4 Clean the Pressure plate whenever the preforms stick to the plate

Step-5 : Clean the rollers daily.

8.3.1 Cleaning for (P0516,P0518,P0519)

Step-1 Clean the Imp regnant powder with the vacuum cleaner.

Step-2 Clean the Machine area.

Step-3 Clean the Nozzle with air.

Step-4 Clean the Pressure plate whenever the preform stick to the plate

Step-5 :Clean the rollers daily.

Step-6 : Clean the load cell with using of bend brush

SETTING CHANGE OVER INSTRUCTIONS

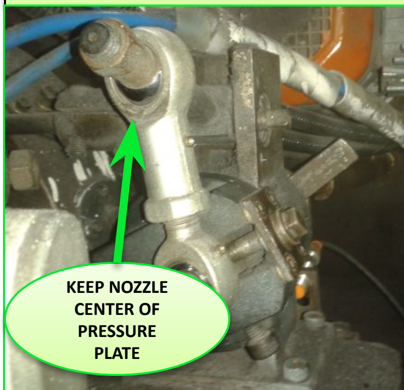
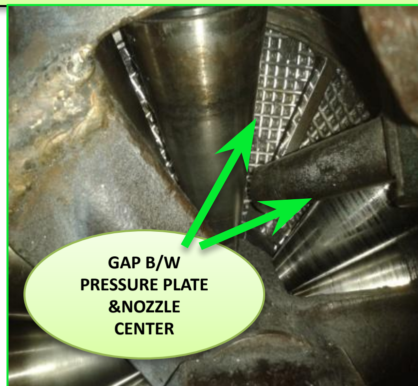
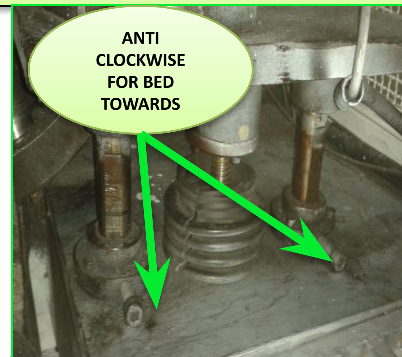
9.1 Setting procedure



1.Keep the nozzle near the centre of the pressure plate by rotating the eccentric.

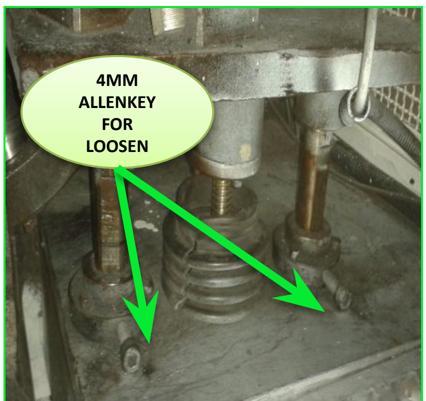


2.Check the distance between pressure plate centre and nozzle centre.

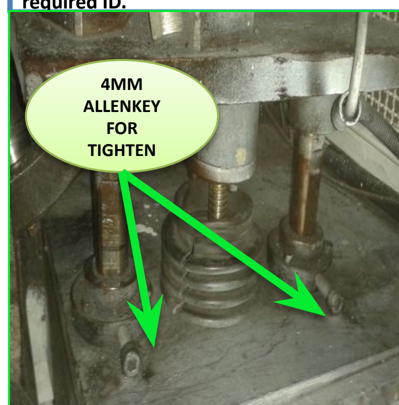


3.If the valve is more then the ID of the facing move the nozzle mounted bed towards the centre of pressure plate by rotating (anti clockwise)bed adjusting screw provided below the bed and set for required ID.

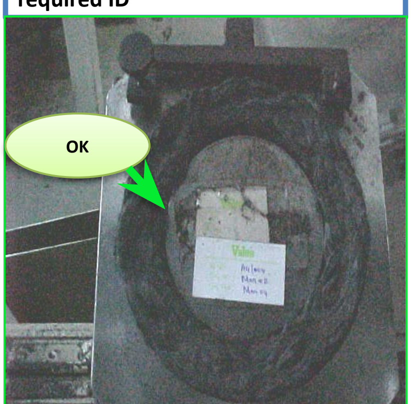
4.If the valve is less then the ID of the facing move the nozzle mounted bed away from the centre of pressure plate by rotating (clock wise) screw provided below the bed and set for required ID



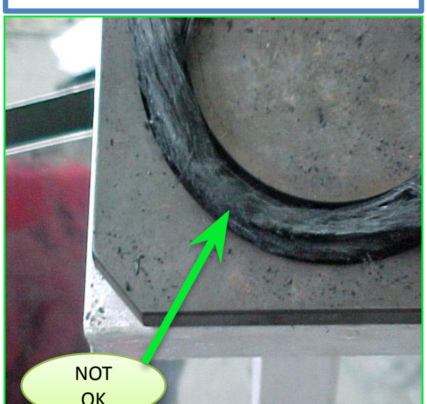
5.Before rotating the bed movement screw loosen the 2 group screws using a 4mm Allen key.



6.Before rotating the bed movement screw tighten the 2 group screws using a 4mm Allen key.



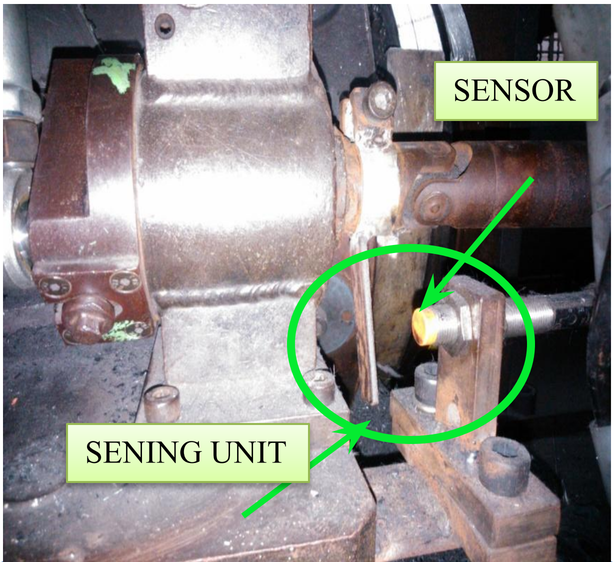
7.Produce one component and check the dimensions using the gauge



8.If width is not OK adjust the eccentric until you get the correct width.

9. If the ID/OD problem, adjust the bed position.

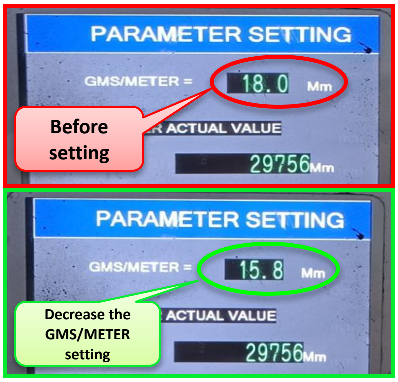
9.1 Setting procedure



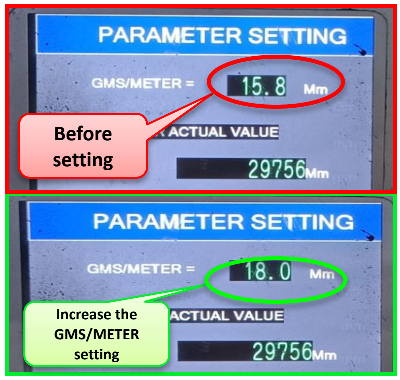
10. The tail sensor position to be adjusted after every setting change.

11. The position of the sensor to be set such that it is to be sensed when nozzle position is in up position..

9.1 Setting procedure



1. To increase the weight decrease the density with the help of MMI



2.To decrease the weight increase the density with the help of MMI .

3. Yarn input pulley

4.To adjust the width unlock the locking screws in the eccentric unit

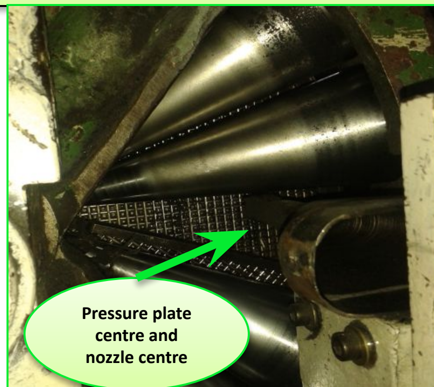
5.And rotate the adjusting screw in anticlockwise direction to increase

6.The width, clockwise direction to reduce the width.

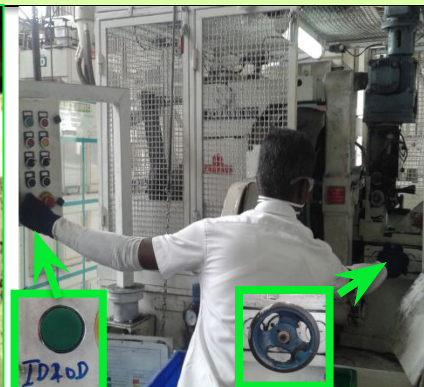
SETTING CHANGE OVER INSTRUCTIONS

9.1 Setting procedure

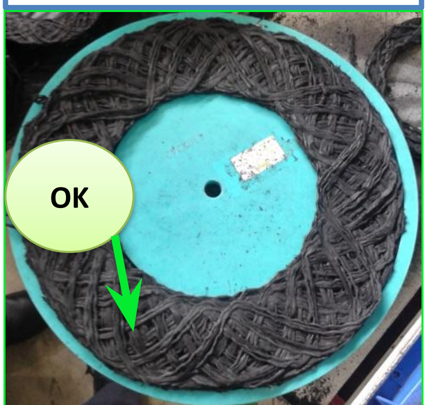
1.Keep the nozzle near the centre of the pressure plate by rotating the eccentric.



2.Check the distance between pressure plate centre and nozzle centre.



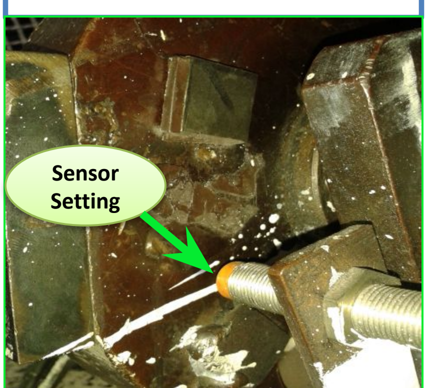
3. Any ID & OD change Push the button & at the same time Rotating the ID & OD wheel.



4.Produce one component and check the dimensions using the gauge

5.If width is not OK adjust the eccentric until you get the correct width.

6. IF the ID/OD problem, adjust the bed forward & reverse position.



7. To continuous Auto cycle sensor fixed the correct position.

QRQC: STOP at 1st defect — Detection — Communication — Analysis — Verification

QR AP
Quick Response & Action Plan

SECTION 1: QR to be filled by **OPERATOR** who detected the issue | SECTION 2: To be filled by **SUPERVISOR**

PROBLEM Description | **Who has been alerted ?** | **Immediate actions <24h** | **OJT decisions** | **Cause 5 Why?**

N° 1 | ☐ Safety
WHAT is the problem and HOW was it detected ?
UNCURED DEFECT ON THE FACING BY VISUAL CHECKING

WHEN ?		WHERE ?	HOW many bad parts ?
Time	7.30PM	TRUCK-1(P0604)	8 NOS
Date	5-Aug-2024		

Same Problem in Past 7 days ? ☐ Yes | N°QRAP | Name: ELAYARAJA(L-3)

Defect description (Draw or Display here Picture) + part number
SIZE;280X170X3.5(F410), SPEC; AS PER VISUAL STD OK, ACT; AS PER VISUAL STD NOT OK, TIME;7.30PM, CYCLENO;40
SIZE;280X170X3.5(F410), SPEC;AS PER VISUAL STD OK, ACT; AS PER VISUAL STD OK, TIME;7.20PM, CYCLENO;39

Who has been alerted ?
☑ Team Leader
☑ Supervisor
☑ Maintenance
☐ Quality
☐ APU Mgr
☑ Site/Prod Mgr
☐ Supply Chain
☐

Containment
Is there a risk on parts already produced? ☐ Yes
If yes, Quality auditor must be alerted and complete the sorting data: Quantity sorted | Quantity NOK

Immediate actions:	Who?	Time

Are all immediate actions DONE? ☑ Yes
Actual time of the restart? 8.05PM

Information to all shift teams during 5' meeting
☑ Morning
☑ Afternoon
☑ Night
☑ Weekend

Decision
☐ Continue Analysis and 5 Whys
☑ Issue solved, no 5 Whys
☐ Escalation in APU QRQC
Comment
ISSUE SOLVED
